Weather nyc radar

The National Weather Service's Doppler is The Doppler's only weather on Long Island. News agencies, TELEVISION stations, military installations and other sites have access to images from you through cooperation with the National Meteorological Service. This way, you can share your photos with all interested groups. Within the National Meteorological Service, NEXRAD is officially called WSR-88D. The term WSR-88D is simply to explain: WSR represents you in weather tracking; 88 represents the year the first NEXRAD was commissioned for use (1988); And the D says it's from you Doppler. You require three integral parts to work: (1) antenna/receiver, (2) computers that process your raw data, and (3) an interactive workstation that forecasters can use to view the processed data. Basically, you work like sonar. It all starts with the Data Acquisition Unit of You (RDA), which is the tower (pictured above) located next to the forecast office. The thy plate (pictured above) is protected by a cover resembling a giant football. Transmitting an antenna inside this protective dome sends a pulse of energy. When this energy hits an object, such as a raindrop or snowflake, it is reflected in all directions. Some of the energy will be reflected back into the antenna, where the dose refines the returned energy. The returned energy, called base data, is sent from an RDA site to the processing computer located here in the office (bottom image). The processing computer, known as the RPG, performs various data quality tests of raw data from you and creates images and products from you. The Advanced Weather Interactive Processing System (AWIPS) workstation allows forecasters to view data from you (image above). There are many kinds of pictures from you. The most common is a reflective image, which shows the extent of precipitation. Unfortunately, you can present echoes that may or may not represent meteorological purposes. The mekh is so sensitive it can detect clouds, dust and aerosol particles, insects, and birds, not to mention planes and ground-based objects near RDA itself. In addition, you alone cannot determine whether precipitation is rain or snow. Forecasters use other information at their disposal to determine this. NEXRAD determines the movement of wind-driven precipitation using a principle known as the Doppler effect. The Doppler effect is changing the frequency of a pulse that is transported from you of energy once it is reflected out of a moving target (precipitation). If the wind moves precipitation towards you, the frequency of energy reflected picked up by NEXRAD increases. If the wind moves away from precipitation, the frequency of reflected energy decreases. The speed is determined by the amount of this frequency change. The sophisticated computers within NEXRAD These frequency shifts which can then be displayed as a color image on the AWIPS work station. The WSR-88D reflective and speed data are the main sources of data that National Meteorological Service meteorologists use to issue short warnings for tornadoes, severe thunderstorms and flash floods. For more than 20 years, Earth's networks have operated the world's largest and most comprehensive weather observation, lightning discovery and climate networks. We are now leveraging our Big Data wisdom to deliver on the promise of IoT. By combining our hyper-local weather data with Devices connected to Smart Home, we predict predictive energy efficiency insights for homeowners and utility companies. Flood warning... Flood warning extended to next Pennsylvania rivers... It's New York. The Soscahana River in Conklin affecting the provinces of Broome and Susquehanna. The Soscahana River in Ugo affects Tioga Province. The Chenango River in Sherborne affects Chenango County. Heavy rain and possible flooding..., the flood watch remained in effect from 11 p.m. to Friday morning... The flood watch continues for * parts of southern Connecticut, northeastern New Jersey, andMoreFlood Watch ... Heavy rain and possible flooding..., the flood watch continues for * parts of southern Connecticut, northeastern New Jersey, andMoreFlood Watch ... Heavy rain and possible flooding..., the flood watch remained in effect from 11 p.m. to Friday morning... The flood watch continues for * parts of southern Connecticut, northeastern New Jersey, andMoreCoastal Flood Consulting... Coastal flood advisory from 2 a.m. to 7 a.m. on Friday... Up to half a metre of above-ground flooding is expected in vulnerable areas near the coastline and coastline. Where... Kings and Southern Queens counties. When... From 02:00 to 07:00 EST Friday. MoreA seaside advisory for coastal floods remains in effect from 02:00 to 7:00 on Friday... One to 60 cm of above-ground flooding is expected in vulnerable areas near the coastline and coastline. Where... Southern Nassau County. When... From 02:00 07:00 EST Fri.Another cost flood consultation... Coastal flood advisory from 4 a.m. to 9 a.m. on Friday... Up to half a metre of above-ground flooding is expected in vulnerable areas near the coastline and coastline. Where... South-western Suffolk and south-east Suffolk counties. When... From 4am to 9am EST Fri. MoreSelevere Costal Flooding * What... Up to half a metre of above-ground flooding is expected in vulnerable areas near the coastline and coastline. Where... North East Suffolk County. When... From late night until Friday morning. *Influences... Brief minor flooding of the more vulnerable spots near the coastline and coastline. More cost flood advice... Coastal flood advisory from 5 a.m. to 10 a.m. on Friday... Up to half a metre of above-ground flooding is expected in vulnerable areas near the coastline and coastline. Where... Connecticut, South Fairfield and Southern New Haven counties. In New York, South Westchester County. MoreFlood Watch.The combination of heavy rain and melting snow could lead to significant flooding. Currents in streams and rivers will grow rapidly... The flood watch remains in effect until Friday morning... The flood watch continues for * parts of central New York and northeastern Pennsylvania, includingMoreWind Consulting... Wind advice remained in effect until 7am on Friday morning... * What...
